

Mr. Darren Woods  
Chairman & CEO  
ExxonMobil Corporation  
5959 Las Colinas Blvd.  
Irving, TX 75039

Dear Mr. Woods,

I am writing to express my concern about the imminent threat climate change poses to our country, to our people and the future of our children. An overwhelming number of scientists agree, and signs abound that climate change is occurring much faster than was initially predicted. We have only a few critical years before the changes become irreversible.

More than 2,000 scientists contributing to the Intergovernmental Panel on Climate Change (IPCC) have made it clear that cuts of at least 50% to 70% in global greenhouse gas emissions are necessary to allow our climate to re-stabilise. Therefore, the Government should be making every effort to reduce greenhouse gas emissions – now.

Specifically, I believe you should act to address the issues below, and I ask you to provide me with information on what ExxonMobil is doing to reduce greenhouse gas emissions in the following areas:

1. Reducing carbon dioxide emissions from coal fired power plants
2. Reducing emissions from the transport sector
3. Funding initiatives for alternative and renewable energy technology
4. Incentives for the uptake of renewable energy
5. Removal of subsidies for fossil-based fuel sources

To secure a future for our nation and our children now is the time to set a new and positive direction for our national energy policy. We need policies that will lead our nation away from fossil based fuels.

Our addiction to fossil fuel harms human health, causes global warming, degrades land and marine ecosystems, and pollutes the earth. We need energy systems that provide clean, renewable, and reliable energy that does not threaten human

health or the environment. We do create our futures, and not to reach for it would be a gross abdication of our moral responsibility.

I understand that focusing on climate change is just one of many issues during these challenging times. However, we cannot wait until tomorrow we must take strong action now to address the daunting issues that climate change poses.

**Please make the fight against climate change your top priority at ExxonMobil. Please do not compromise on this issue. Time is of the essence. While it may seem counter-intuitive to ask this of an oil and gas company, it is you and your colleagues who can make a difference. Please think outside the box and implement the necessary policies to stop global warming. Our world and our young people are depending on you.**

Thank you so much in advance for your immediate response to these urgent needs.

Sincerely,

Mr. Michael J. Hennigan  
Chairman & Chief Executive Officer  
Marathon Petroleum  
539 South Main Street  
Findlay, OH 45840

Dear Mr. Hennigan,

I am writing to express my concern about the imminent threat climate change poses to our country, to our people and the future of our children. An overwhelming number of scientists agree, and signs abound that climate change is occurring much faster than was initially predicted. We have only a few critical years before the changes become irreversible.

More than 2,000 scientists contributing to the Intergovernmental Panel on Climate Change (IPCC) have made it clear that cuts of at least 50% to 70% in global greenhouse gas emissions are necessary to allow our climate to re-stabilise. Therefore, the Government should be making every effort to reduce greenhouse gas emissions – now.

Specifically, I believe you should act to address the issues below, and I ask you to provide me with information on what Marathon is doing to reduce greenhouse gas emissions in the following areas:

1. Reducing carbon dioxide emissions from coal fired power plants
2. Reducing emissions from the transport sector
3. Funding initiatives for alternative and renewable energy technology
4. Incentives for the uptake of renewable energy
5. Removal of subsidies for fossil-based fuel sources

To secure a future for our nation and our children now is the time to set a new and positive direction for our national energy policy. We need policies that will lead our nation away from fossil based fuels.

Our addiction to fossil fuel harms human health, causes global warming, degrades land and marine ecosystems, and pollutes the earth. We need energy systems that provide clean, renewable, and reliable energy that does not threaten human

health or the environment. We do create our futures, and not to reach for it would be a gross abdication of our moral responsibility.

I understand that focusing on climate change is just one of many issues during these challenging times. However, we cannot wait until tomorrow we must take strong action now to address the daunting issues that climate change poses.

**Please make the fight against climate change your top priority at Marathon Petroleum. Please do not compromise on this issue. Time is of the essence.
